

2019 Pediatrics Comprehensive Review Course Syllabus

Adolescent Medicine & Sexual Health:

Page 9, Eating Disorders > Anorexia Nervosa – Other Physical Findings: Gastrointestinal

The content below, which currently appears **before AR 6**, **should appear immediately following AR 6**

Anorexia Nervosa — Other Physical Findings: Gastrointestinal

- Constipation
- Acute pancreatitis
- Gastroparesis
 - Delayed emptying of the stomach
- Superior mesenteric artery syndrome
 - Symptoms relieved by lying prone, in the left lateral decubitus, or in a knee-chest position
 - These positions open the space between superior mesenteric artery and aorta
- CT demonstrating: Duodenal compression (black arrow) by the superior mesenteric artery (red arrow) and the abdominal aorta (blue arrow)

Allergy & Immunology:

Page 10, Immunodeficiencies > Phagocyte Disorders > Job Syndrome (Hyper-IgE Syndrome)

<i>Text currently reads:</i>	<i>Text should read:</i>
<ul style="list-style-type: none"> • Recurrent abscesses, eczema, scoliosis, hyperextensibility, delayed eruption of primary team, pneumatoceles 	<ul style="list-style-type: none"> • Recurrent abscesses, eczema, scoliosis, hyperextensibility, delayed eruption of primary teeth, pneumatoceles

Emergency Medicine and Maltreatment Syndromes:

Page 14, Toxicology > Toxicology High-Yield Pearls

<i>Text currently reads:</i>	<i>Text should read:</i>
<ul style="list-style-type: none"> • Opiate ingestion <ul style="list-style-type: none"> – CNS depression, AMS, miosis 	<ul style="list-style-type: none"> • Opiate ingestion <ul style="list-style-type: none"> – Respiratory depression, AMS, miosis

Endocrinology:

Page 9, Calcium / Phosphorus > Causes of Hypoparathyroidism — DiGeorge Syndrome

<i>Text currently reads:</i>	<i>Text should read:</i>
<ul style="list-style-type: none"> • Clinical features • Cardiac disease <ul style="list-style-type: none"> • Interrupted aortic arch, ASD, VSD, pulmonary stenosis, right aortic arch, truncus – Abnormal facies – Thymus — absence or hypoplasia, immunodeficiency – Cleft palate – Hypoparathyroidism — leading to hypocalcemia 	<ul style="list-style-type: none"> • Clinical features <ul style="list-style-type: none"> – Cardiac disease <ul style="list-style-type: none"> • Interrupted aortic arch, ASD, VSD, pulmonary stenosis, right aortic arch, truncus – Abnormal facies – Thymus — absence or hypoplasia, immunodeficiency – Hypoparathyroidism — leading to hypocalcemia

Gastroenterology:

Page 12, Liver and Gallbladder Disorders > Gilbert Syndrome

<i>Text currently reads:</i>	<i>Text should read:</i>
<ul style="list-style-type: none"> • Presents with jaundice when ill or lasting and resolves with illness; Benign, no treatment needed 	<ul style="list-style-type: none"> • Presents with jaundice when ill or fasting and resolves with illness; Benign, no treatment needed

Genetics:

Page 3, Types of Genetic Disease > Large Chromosome Abnormalities >

Autosomes: Trisomy 18 and 13 Syndromes

<i>Text currently reads:</i>	<i>Text should read:</i>
<ul style="list-style-type: none"> • Etiology (statistics vary) <ul style="list-style-type: none"> – Full trisomy 80% – Mosaic and translocations 20% <ul style="list-style-type: none"> • T13;14 — common for T13 	<ul style="list-style-type: none"> • Etiology (statistics vary) <ul style="list-style-type: none"> – Full trisomy 80% – Mosaic and translocations 20% <ul style="list-style-type: none"> • t13;14 — common for T13

Genetics:

Page 15, Common Syndromes Organized by Presenting Symptom > Anomalies, Sequences, Associations – Pierre Robin Sequence

<i>Text currently reads:</i>	<i>Text should read:</i>
<ul style="list-style-type: none"> • Seen often in Stickler syndrome (AD) <ul style="list-style-type: none"> – Associated hearing loss and retinal dislocation 	<ul style="list-style-type: none"> • Seen often in Stickler syndrome (AD) <ul style="list-style-type: none"> – Associated hearing loss and retinal detachment

Hematology:

Page 5, Part 1 — Red Cell Disorders > Sickle Cell Anemia

<i>Text currently reads:</i>	<i>Text should read:</i>
<ul style="list-style-type: none"> • Lab features <ul style="list-style-type: none"> – Normocytic anemia – Increased reticulocyte count – Thrombocytosis – Leukocytosis – Peripheral smear: Sickle cells, polychromasia, Howell-Jolly bodies – Hbg profile: HbSS (>> 50% HbS); NB screen: FS 	<ul style="list-style-type: none"> • Lab features <ul style="list-style-type: none"> – Normocytic anemia – Increased reticulocyte count – Thrombocytosis – Leukocytosis – Peripheral smear: Sickle cells, polychromasia, Howell-Jolly bodies – Hgb profile: HbSS (>> 50% HbS); NB screen: FS

Hematology:

Page 8, Part 2 — White Cell Disorders > Chronic Benign Neutropenia

<i>Text currently reads:</i>	<i>Text should read:</i>
<ul style="list-style-type: none"> • Diagnosis <ul style="list-style-type: none"> – Antineutrophil antibody usually positive – BM exam: Maturation arrest at earlier stages 	<ul style="list-style-type: none"> • Diagnosis <ul style="list-style-type: none"> – Antineutrophil antibody usually positive – BM exam: Rule out maturation arrest at earlier stages

Metabolic Disorders:

Page 5, Disorders of Intoxication > Intoxications – Urea Cycle Disorders > CPS I and NAGS Deficiencies

<i>Text currently shows this figure:</i>	<i>Text should show this figure:</i>
<p>The diagram shows the urea cycle with the following components: CO₂ + NH₄⁺ (top left), NAGS (top left, crossed out with a red X), Carbamoyl Phosphate (top left), Ornithine (left), OTC (top center), Citrulline (top right), Argininosuccinic synthase: ASS (right), Argininosuccinate (right), Arginase (bottom right), Argininosuccinic lyase: ASL (bottom right), Aspartate (bottom right), Fumarate (bottom right), Arginine (bottom left), Urea (left), and NAGS (center, crossed out with a red X). Red circles with 'X' are placed over NAGS and CPS-I.</p>	<p>The diagram shows the urea cycle with the following components: CO₂ + NH₄⁺ (top left), CPS-I (top left, crossed out with a red X), Carbamoyl Phosphate (top left), Ornithine (left), OTC (top center), Citrulline (top right), Argininosuccinic synthase: ASS (right), Argininosuccinate (right), Arginase (bottom right), Argininosuccinic lyase: ASL (bottom right), Aspartate (bottom right), Fumarate (bottom right), Arginine (bottom left), Urea (left), and NAGS (center, crossed out with a red X). Red circles with 'X' are placed over NAGS and CPS-I.</p>

Metabolic Disorders:
