They perform well in those ≥ 5 years of age; some data supports use in children ≥ 3 years. They are the preferred test in those ≥ 5 years of age who have been vaccinated with bacillus Calmette-Guérin (BCG) because antigens used for the test are not found in BCG or most nontuberculous mycobacteria.	They perform well in those ≥ 2 years of age. They are the preferred test in those > 2 years of age who have had the BCG vaccination.

Neonatology:
